DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Gary Cummings (847) 862-0270 on 26 October 2006.

Cancel claims 34 and 43.

Amend claims 23, 25, 35, 36, 44 and 45 as follows:

23. (Currently amended) A vehicle comprising: a vehicle network communicatively coupling a plurality of devices within the vehicle, each device including an interface, and each device configured for an operation independent of the interface, wherein the coupling between devices includes at least one redundant path and the coupling defines multiple simultaneous communication paths, and

a router configured to determine at least one communication path from the multiple simultaneous communication paths, wherein one communication path comprises a no-go zone configured to carry at least one data packet to the exclusion of other data packets to provide assured communication capability between at least two devices associated with the no-go zone.

25. (Currently amended) The vehicle of claim 24 wherein the packet data protocol is selected from the group consisting of TCP/IP, and ATM, ~~INFINIBAND®, and RAPIDIO.~~

35. (Currently amended) The vehicle of claim 23 further comprising a steer-by-wire application, and wherein the steer-by-wire application is associated with a first device and a second device, the first device and second device connected by at least one no-go zone.

36. (Currently amended) A system within a vehicle, the system comprising:
a plurality of devices communicatively coupled by the system, each device including an interface, and each device configured for an operation independent of the interface, wherein the coupling between devices includes at least one redundant path and the coupling defines multiple simultaneous communication paths, and
a router configured to determine at least one communication path from the multiple simultaneous communication paths, wherein one communication path comprises a no-go zone configured to carry at least one data packet to the exclusion of other data packets to provide assured communication capability between at least two devices associated with the no-go zone.

44. (Currently amended) The system of claim 36 further comprising a steer-by-wire application, and wherein the steer-by-wire application is associated with a first

device and a second device, the first device and second device connected by at least one no-go zone.

45. (Currently amended) A vehicle comprising:

a vehicle network communicatively coupling a plurality of devices within the vehicle;

a plurality of devices communicatively coupled by the vehicle network, each device including an interface, and each device configured for an operation independent of the interface, wherein the coupling between devices includes at least one redundant path and the coupling defines multiple simultaneous communication paths; and

means for determining ~~determine~~ at least one communication path from the multiple simultaneous communication paths, wherein one communication path comprises a no-go zone configured to carry at least one data packet to the exclusion of other data packets to provide assured communication capability between at least two devices associated with the no-go zone.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 23, 36 and 45 are allowed.

The prior art discloses a vehicle comprising a first device and a second device, an network communicatively coupling the first and second data devices, and a plurality of devices communicatively coupled by the vehicle network and connection media being configurable to provide a plurality of communication paths between the first device and the second device for a communication between the first device and second device.

The prior art however fails to disclose or suggest a router configured to determine at least one communication path from the multiple simultaneous communication paths, wherein one communication path comprises a no-go zone configured to carry at least one data packet to the exclusion of other data packets to provide assured communication capability between at least two devices associated with the no-go zone.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Raj K. Jain whose telephone number is 571-272-3145. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chi Pham can be reached on 571-272-3179. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
